FROZEN PIPES?
Quick Tips for Safe Cooling Tower Startup after the Thaw

VISUALLY INSPECT
Check for damage to pipes, makeup floats, and check the hot deck for damage to nozzles from freezing.

CHECK FOR BLOCKAGES
Once flow is established, check the hot deck and fill for blockages. There could be lingering ice in the shady spots that can break off and block flow.

START UP SLOWLY
Makeup water one tower at a time, checking for leaks as you go. If you spot leaks, shut down and call your mechanical contractor or plumber.

INSPECT YOUR TREATMENT EQUIPMENT
Check your chemistry controller and pumps for proper operation. Inspect feed tubing for brittle sections or leaks. Call Earthwise to help get your operations back on track.

GOT DAMAGE? CALL YOUR EARTHWISE REP OR OUR OFFICES AT 855-868-8809
